Profile

Computer engineering graduate with about two years of building web and mobile applications, both for local companies in Kigali and remotely for clients abroad. Most of my day-to-day work is Node.js and React; older client projects run on Laravel and Vue. I also handle my own deployments on Vercel, Render, cPanel and Spaceship, and I am used to picking up whatever stack a team already runs on.

Experience

Full Stack Developer

San Tech · Kigali, Rwanda · Oct 2025 – Present

- Build and maintain internal web applications on a Node.js backend with a React frontend. Two of the older systems are Laravel and Vue, and I keep those running too.
- Write the REST APIs the frontend depends on, and make sure the screens still work properly on a phone.
- Broke one large, tangled codebase into smaller modules, which stopped small fixes from breaking unrelated pages.

Developer, Professional Training

Solvit Africa · Kigali, Rwanda · July 2025 – Oct 2025

- Completed the Code2Connect fellowship, a hands-on programme in Node.js and React.js.
- Built several full-stack projects from scratch, each with working CRUD operations and user authentication.

Software Developer (Internship)

Silver Rwanda Ltd · Kigali, Rwanda · June 2024 – Feb 2025

- Worked on Laravel backends and React Native screens for client projects.
- Set up Docker for the local environment so the team stopped losing time to machines being configured differently, and worked day to day in shared Git branches.

Mobile Developer

LLC CROP · Japan (Remote) · Feb 2024 – Feb 2025

- Built cross-platform mobile apps in React Native for a Japanese client, working remotely and across a seven-hour time difference.

WordPress Developer

Brave Tech · Kigali, Rwanda · Feb 2024 – Apr 2024

- Built and customised WordPress sites, editing themes directly in PHP, HTML, CSS and JavaScript rather than relying on page builders.

Education

BSc in Computer Engineering — University of Rwanda, 2025

Secondary School — Mathematics, Economics and Computer Science, Muhororo Secondary School, 2016–2019

Technical Skills

Languages JavaScript, PHP	Frontend React, Vue, React Native, WordPress	Backend Node.js, Laravel, NestJS
Databases PostgreSQL, MySQL, MongoDB	DevOps Docker, Vercel, Render, cPanel, Spaceship	Tools Git, Swagger, Postman

Other Strengths

- Teamwork
- Collaboration
- Problem solving
- Creativity
- Adaptability
- Flexibility
- Quick to learn

Languages

- English — very good
- Kinyarwanda — native
